Impact and ESG investing will require substantial investment in new sustainable infrastructure, eco-friendly transportation, more efficient production processes, sustainable supply chains and cleaner technologies. This will lead to extraordinary economic growth over the coming decades.

Coninco has been committed to this approach since 2007. We encourage companies to take positive action rather than applying a negative exclusion line, and we manage diversified sustainable solutions for our clients.

Our offer includes 'one creation cooperative', an impact investment solution, which includes companies that have a positive impact on the environment and investments in green infrastructure; an ethical physical gold offer; and two sustainability funds, the One Sustainable Fund Global Environment and One Sustainable Fund Europe Dividend funds. We are also launching the Mirabaud Coninco Swiss Engagement fund soon.
